The Oncologist
Symptom Management and Supportive Care

Guidelines for Antiemetic Treatment of Chemotherapy-Induced Nausea and Vomiting: Past, Present, and Future Recommendations

KARIN JORDAN, CHRISTOPH SIPPEL, HANS-JOACHIM SCHMOLL

Department of Internal Medicine IV, Oncology/Hematology, Martin-Luther-University Halle/Wittenberg, Halle/Saale, Germany

Key Words. Antiemetic therapy • ASCO antiemetic guidelines • MASCC antiemetic guidelines NCCN practice antiemesis guidelines • 5-HT_3 serotonin-receptor antagonists • Neurokinin$_1$-receptor antagonist

Disclosure: No potential conflicts of interest were reported by the authors, planners, reviewers, or staff managers of this article.

LEARNING OBJECTIVES

After completing this course, the reader will be able to:

1. Explain the optimal antiemetic prophylaxis for patients receiving chemotherapy in regard to the emetogenic potential of the therapy.
2. Describe the difference between acute and delayed emesis.
3. Discuss the properties and optimal use of the different antiemetic drugs.

CME Access and take the CME test online and receive 1 *AMA PRA Category 1 Credit*™ at CME.TheOncologist.com

ABSTRACT

Clinicians should be aware that chemotherapy-induced nausea and vomiting (CINV) is still one of the most feared side effects of chemotherapy. With the correct use of antiemetics, CINV can be prevented in almost 70% to up to 80% of patients. Treatment guidelines are useful tools that enable physicians to integrate the latest clinical research into their practices. The large volume of rapidly evolving clinical data has been summarized and incorporated into treatment recommendations by well-known and reliable institutions, including the Multinational Association of Supportive Care in Cancer, the American Society of Clinical Oncology, and the National Comprehensive Cancer Network. Despite the availability of such guidelines, however, there is evidence that adherence to and implementation of treatment recommendations are less than optimal. This review focuses, in particular, on the conformity and differences of these three guidelines. Furthermore, open questions and trends in the field of antiemesis are discussed as well. *The Oncologist* 2007;12:1143–1150

Full text of estimated impact for NHS. This is a phase 3 3 Comparing Netuputant / Palonosetron with Palonosetron in 1455 adults (for most women with breast cancer) subjected to anthracycline-based chemotherapy more cyclophosphamide (AApro et al. in AApro et al. The study program also included a phase 2 study 2 At variable dose that compared 3 different doses of Netupant / Palonosetron with Palonosetron in subjects subjected to highly emetogenic cisplatin-based chemotherapy (Hesketh et al. The primary outcome was the complete answer (defined as the absence of emesis and rescue therapy) During the delayed phase of the cycle 1 (25a-120 hours after chemotherapy). Overall, the EPAR concluded that Netuputant / Palonosetron is well tolerated, with many adverse reactions probably associated with the basic pathology or cytotoxic treatments Associati. Full text of product overview. The recommended dose in the summary of product features is a Netuputant / Pa capsule LONOSETRON 300Ã, mg / 500ã, micrograms to take about 1ã, now before the beginning of each chemotherapy cycle. Palonosetron is already available in oral and injectable formulations. Akenzeo Capsule contains 300 mg of Netuputant (a neurochinine receptor antagonist) and 500 micrograms of Palonosetron (a 5-HT3 receptor antagonist). Serious adverse events and deaths similarly reflect the patient's population and current treatment. (2014), a greater number of people reached the primary outcome of complete response during the overall phase (from 0 to 120 hours after chemotherapy) of the cycle 1 with Netuputant / Palonosetron 300ã, mg / 500ã, micrograms compared to Palonosetron 500Ã, micrograms (89.6% [121/135] 36]; p = 0.004). People can also vary in their predisposition to «nausea and vomiting induced by drugs; most often affected people include women, age less than 50 years old, anxious people and adiug adiug anu rep ICN inoizamrofni elled ozzilituiR eredev ,itunetnoc itseuq ittut o inucla errudorpir aredised is eS .isotenic ad etteffa Copyright and permissions. The costs for the other 5 ä¨¬ receptor antagonist treatment regimens range from approximately Â£48 to Â£103 per cycle of chemotherapy. There are limited data comparing NetUPitant / Palonosetron with other neurokinin receptor antagonists (ad Aprepitant) and 5 ä¨¬” HT3 receptor antagonists (such as Ondansantron or Granisetron) provided in combination. Regulatory status: NetUPitant / Palonosetron Capsules (Akynzeo) received a marketing authorisation from the United Kingdom in May 2015 and were launched in the United Kingdom in September 2015. Two neurokinin 1 receptor antagonists are available in the UK: aprepitanny capsules and fosaprepitant intravenously (a proä¨¬” drug of aprepitant) [see summaries of product characteristics]. NetUPITANT/Palonosetron (Akynzeo) is licensed in adults for the prevention of neurokinin 1 receptor antagonists. Acute and delayed nausea and vomiting associated with chemotherapy with highly emetogenic cisplatin cancer chemotherapy or moderately emetogenic cancer chemotherapy. Ad Aapro et al. NetUPitant/Palonosetron capsules are provided as a single dose before each chemotherapy cycle, which may simplify the treatment regimen and be preferable to some people. NetUPitant / Palonosetron costs Â£69.00 per cycle of chemotherapy. Full text of introduction and current guide. In line with other 5-â¬ HT3 receptor antagonists, the PSC also includes warnings and precautions on the risk of serotonin syndrome and Qt prolongation. NetUPitant / Palonosetron capsules are provided as a single dose prior to each chemotherapy cycle. (2014), participants were randomised to receive Netuitutant / Palonosetron 300 mg / microgram of 300 mg / 500 or Palonosetron 500 micrograms. (both given in len len otamreffa emoC .)47,0 = P ,%9,78'lla ottepsir %3,78(otatlusir otseuq rep ippurg 2 i art avitacifingis etnemacitsitats aznereffid anucla are'c non atuca esaf al rep aivattuT .aiparetoimehc id olcic omirp led onroig li otad)enosatemased noc cases of severe constipation and complications due to constipation were seen during the clinical trial programme and information on this has been included in the SPC. Full text of context. Full text of evidence review. In both Aapro et al. Chemotherapy regimens vary in the extent to which they cause nausea and vomiting, usually classed as having a minimal, low, moderate or high degree of emetogenicity. In Hesketh et al. (2014) and Gralla et al. The EPAR for netupitant/palonosetron capsules states that a total of 1538Ã Âpeople received netupitant/palonosetron at the licensed dose during the clinical study programme, with 1169Ã Âpeople with cancer having at least 1Ã Ådose while participating in a phase 2 or 3 study and 317Ã Âpeople having 6 or more cycles of treatment. In the case of permitted digital reproduction, please credit the National Cancer Institute as the source and link to the original NCI product using the original product's title; e.g., ¢ÃÂÂNausea and Vomiting Related to Cancer Treatment (PDQÃ®Ã)¢ÃÂÂHealth Professional Version was originally published by the National Cancer Institute.¢ÃÂÂ Netupitant/palonosetron shows statistically significant benefits compared with palonosetron alone (both in combination with dexamethasone) in people receiving emetogenic chemotherapy, mainly in the prevention of delayed nausea and vomiting. This evidence summary discusses the best available evidence on the safety and efficacy of netupitant/palonosetron. Two other 5¢ÃÂÃHT3 receptor antagonists are also available in the UK: ondansetron (available in oral, injectable and rectal formulations) and granisetron (available in oral, injectable and transdermal formulations). (2014) netupitant/palonosetron was compared with palonosetron. More participants in the netupitant/palonosetron group had no significant nausea (defined as a score of less than 25Ã Âmm on a visual analogue scale from 0Ã Âmm [no nausea] to 100Ã Âmm ['nausea as bad as it .la .la te htekseH dna)4102(.snemiger yparehtomehc desab edimahpsohpolcyc sulp enilcycarhtna ro cinegoteme ylhgih gniviecer elpoep ni gnitimov dna aesuan fo noitneverp eht rof tsinogatna rotpecer 1ÃÂÃ¢ninikoruen a dna tsinogatna rotpecer 3THÂÂÃ¢5 a htob gnidulcni snemiger dnemmocer senilediug citemeitna)OMSE(ygolocnO lacideM fo yteicoS naeporuE eht dna)CCSAM(recnaC ni eraC evitroppuS rof noitaicossA lanoitanitluM eht gnidulcni senilediuG .la te allarG(yparehtomehc cinegoteme ylhgih ro yletaredom gnivah elpoep 803 ni nortesonolap/tnatiputen fo ytefas eht dessessa taht TCR 3 esahp a dna)4102 .)410.0=p ,%3.17 htiw derapmoc %9.67(puorg nortesonolap eht htiw derapmoc 1 elcyc fo esahp deyaled eht gnirud)]'eb
