- DH
 - PSK
 - IKE
 - AES *
 - 3DES *
 - SHA *
16. Which algorithm is an asymmetrical key cryptosystem?
- RSA *
 - AES
 - 3DES
 - DES
17. Which two algorithms use Hash-based Message Authentication Code for message authentication? (Choose two.)
- 3DES
 - DES
 - AES
 - MD5 *
 - SHA *
18. Which three statements describe the building blocks that make up the IPsec protocol framework? (Choose three.)
- **IPsec uses encryption algorithms and keys to provide secure transfer of data.** *
 - IPsec uses Diffie-Hellman algorithms to encrypt data that is transferred through the VPN.
 - IPsec uses 3DES algorithms to provide the highest level of security for data that is transferred through a VPN.
 - **IPsec uses secret key cryptography to encrypt messages that are sent through a VPN.** *
 - IPsec uses Diffie-Hellman as a hash algorithm to ensure integrity of data that is transmitted through a VPN.
 - **IPsec uses ESP to provide confidential transfer of data by encrypting IP packets.** *
19. A network design engineer is planning the implementation of an IPsec VPN. Which hashing algorithm would provide the strongest level of message integrity?
- SHA-1
 - MD5
 - AES
 - **512-bit SHA ***
20. What is the purpose of using Diffie-Hellman (DH) algorithms as part of the IPsec standard?
- DH algorithms allow unlimited parties to establish a shared public key that is used by encryption and hash algorithms.
 - **DH algorithms allow two parties to establish a shared secret key that is used by encryption and hash algorithms.** *
 - DH algorithms allow unlimited parties to establish a shared secret key that is used by encryption and hash algorithms.
 - DH algorithms allow two parties to establish a shared public key that is used by encryption and hash algorithms.

- by encoding the information field in the PPP frame
- by specifying the protocol during link establishment through LCP

8. Which address is used in the Address field of a PPP frame?

- a single byte of binary 00000000
- a single byte of binary 10101010
- a single byte of binary 11111111***
- the IP address of the serial interface

9. Which three physical layer interfaces support PPP? (Choose three.)

- FastEthernet
- GigabitEthernet
- POTS
- asynchronous serial ***
- synchronous serial ***
- HSSI***

10. Which three are types of LCP frames used with PPP? (Choose three.)

- link-negotiation frames
- link-acknowledgment frames
- link-maintenance frames***
- link-termination frames***
- link-control frames
- link-establishment frames***

11. Which protocol will terminate the PPP link after the exchange of data is complete?

- NCP
- LCP***
- IPCP
- IPXCP

12. During a PPP session establishment phase, which two messages are sent by the requested party if the options are not acceptable? (Choose two.)

- Configure-Nak***
- Code-Reject
- Protocol-Reject
- Configure-Reject***
- Discard-Request

13. Which three statements are true about PPP? (Choose three.)

- PPP can use synchronous and asynchronous circuits.***
- PPP can only be used between two Cisco devices.
- PPP carries packets from several network layer protocols in LCPs.
- PPP uses LCPs to establish, configure, and test the data link connection.***
- PPP uses LCPs to agree on format options such as authentication, compression, and error detection.***

14. Which PPP option can detect links that are in a looped-back condition?

- Magic Number***
- MRU
- Callback

Ccn2a v6.0 chapter 5 exam answers 2019.

All devices connected to the hubs share the same bandwidth (unlike a switch, which offers each device dedicated bandwidth). Last updated on June 14, 2021 by Admin It Essentials 7 Chapter 5 Responses Quiz 2020 Correct 100% Ite 7.0 Chapter 5 Responses Quiz Responses explanation and suggestions: Lar -band technology uses different frequencies, divided into different channels, to allow the simultaneous transmission of More different signs on the same cable. Functions at each level include different protocols. IPS 802.11 Z-Wave Ethernet Over Power Answers explanation and suggestions: Ethernet Over Power or Powerline Networking, uses a device that connects to a power outlet and a cable to connect a device to a network. Z-Wave 802.11C T568B 802.11N Zigbee T568a Answers explanation and suggestions: T568a and T568B are wiring schemes used with LAN Ethernet wiring. Bluetooth allows devices to communicate on short distances. Zigbee and Z-Wave are intelligent domestic standards. IDS IPS Proxy Server Firewall Answers explanation and suggestions: An IDS system is implemented to passively monitor traffic on a network. Both an IPS and a firewall actively monitor network traffic and take immediate actions when the previously defined safety criteria correspond. Wlan is a wireless LAN covering a rather small geographical area. Traceroute DNS DHCP Telnet answers explanation and suggestions: Dynamic Host Configuration Protocol (DHCP) can be used to allow the final devices to automatically configure IP information, such as their IP address, the sober mask, the DNS server and the default gateway. IEEE 802.11 is a standard for wireless networks. Z-Wave is a type of network network in an intelligent house. 802.11a and 802.11ac operate only in the 5 GHz frequencies range. DSL, cable and satellite are examples of broadband network connections. Answer explanation and suggestions: a switch handling a switch table that contains a list of Mac addresses available in the network, the switching table registering the Mac addresses by inspecting the Mac address of origin of each arrival frame. UDP ICMP TCP FTP IP responses explanation and suggestions: The TCP/IP model includes four levels. A man connects more LAN in a large campus or in a city. A proxy server, when it works like a firewall, also actively monitors the traffic that runs it and undertakes immediate actions. Telnet is a method for remotely accessing a CLI session of a switch or router. Tracerouteā € It is a command used to determine the path that a package takes while crossing the net. The level of application, the level of transport, the Internet level and the level of access to the network. 802.11ac 802.11n Zigbee Z responses Wave explanation and suggestions: The Zigbee coordinator is a device that manages all Zigbee client devices to create a network of Zigbee wireless area (PAN) using the 868 MHz range at 2.4 GHz. HTTP and HTTPS are protocols commonly used to access the web pages. A system for prevention of intrusions (IPS) is a safety device that monitors all incoming and outgoing traffic. The DNS service is used to provide the resolution of domain names, mapping host names to IP addresses. These devices are often connected to Bluetooth technology. Answers in wood fiber in nylon copper nylon explanation and suggestions: the common media used in networks include optic fiber of copper, glass or plastic and wireless. Lan man wan wlan replies explanation and suggestions: a wan Piu LAN found in geographically separate positions. Modem Router Switch Hub replies explanation and suggestions: hubs are sometimes called repeaters because they regenerate the signal. The transport layer includes both the il and UDP protocols. Pan Lan Man Wlan responds explanation and suggestions: a personal area network (PAN) connects devices, such as mice, keyboards, printers, smartphones and tablets. 802.11n 802.11ac 802.11g 802.11a 802.11B Replies explanation and suggestions: 802.11b and 802.11g work in the 2.4 GHz range and 802.11n can work in range 2.4 GHz or 5 GHz. 20 21 53 110 80 responses explanation e Tips: HTTP uses the TCP 80 and HTTPS port uses the TCP 443 port. 443.
